

Copper Wire

After having dug to a depth of 10 feet last year, British scientists found traces of copper wire dating back 1500 years and concluded that their ancestors already had a telephone network more than 2000 years ago.

Not to be outdone by the British, in the weeks that followed, an American archaeologist dug to a depth of 20 feet, and shortly after, a story published in the New York Times: "American archaeologists, finding traces of 2000-year-old copper wire, have concluded that their ancestors already had an advanced high-tech communications network 100 years earlier than the British"

One week later, Australia's Northern Territory Times, reported the following:

"After digging at deep as 30 feet in his backyard in Tennant Creek, Northern Territory, Aboriginal Billi Bunji, a self-taught archaeologist, reported that he found absolutely fuck-all.

Billi has therefore concluded that 3000 years ago, Australia had already gone wireless.

"Makes me feel bloody proud to be Australian!"
